----------------------	--

Product Characteristics	<p>Seawake is the result of a renovation of the first Gin produced by Bad Spirits. After having undertaken some initiatives in support of the environment, the desire not to remain indifferent to the changes of our planet was the crucial driving force behind the development of this project.</p> <p>The first step was to choose sustainable materials: recycled glass bottles and labels made from plastic destined to be dispersed in the oceans, on which there will be a series of illustrations dedicated to the creatures that inhabit our waters.</p> <p>The cap will be eco-friendly, made of recycled and recyclable natural cork that can be disposed of as organic material.</p> <p>Moreover Bad Spirits has decided not to stop there and with the purchase of each bottle, 5% will be donated to support Marevivo, an organisation whose aim is to protect and conserve the ecosystem and species of our seas.</p>
-------------------------	---

Flavour description	<p>The balance between the botanicals makes this gin a masterpiece.  The combination of fennel seeds, coriander and juniper with orange zest make this gin round and delicate on the palate.</p>
Uses & Cocktails	<p>An aromatic cocktail with a Mediterranean aftertaste: Seawake Gin, tonic water, orange peel and basil.</p>
Ingredients	JUNIPER
	CARDAMOM
	CORIANDER
	ORANGE PEEL
	FENNEL
	GRAIN ALCOHOL
	WATER

## COMPANY'S PROFILE

Our liquor factory is a family business enterprise based on craftsmanship. Our aim has always been to produce high quality liqueurs, using only distilled grain alcohol (rye and wheat) and allergen-free, 100% natural aromas. In addition, we paid special attention to the design of each bottle, because we wanted each product to have its own unique identity. Each liqueur conveys its own history and origin. We are proud of our products and we hope you can sense our ongoing commitment to our business through their unique flavours.

## QUALITY CONTROL INFORMATION

Production Process	Before starting the production process, it is mandatory not only to check the raw materials that will be used (alcohol, botanicals), but also the bottles and caps that will need to be sterilized. The operators in charge will follow the production process by carrying out sample tests from time to time. At the end of the production, it will be necessary to carry out a quality control on the finished product and finally, to fill in the documentation for the customs administration.
Employees	Employees must wear protective equipment before entering the laboratory (mask, gloves, gown and possibly during certain productions also the protective mask for the eyes). Protective tools should not be removed until the operator leaves the laboratory.
Facilities and Equipments	The facilities and equipments must be sanitized at the end of each production; it is absolutely necessary not only to disinfect, but to remove the residues of previous botanicals to avoid contaminating the flavors of subsequent productions. Furthermore, according to the hygiene regulations, the use of specific products is mandatory. The maintenance of all equipment must be checked on a regular basis according to the quantities produced.
